PROFESSIONAL SUMMARY

Machine Learning Engineer with a solid background in data analysis and data science. BSc in Computer Science. Builds the full pipeline in Python: data cleaning, feature engineering, exploratory analysis, model training and evaluation, and deployment as APIs and apps with FastAPI and Streamlit. Delivered a face recognition system, classification and regression models, an anomaly detector and deep neural networks from scratch. Taught and mentored over 50 learners in Python, SQL, Power BI and Excel.

TECHNICAL SKILLS

Programming: Python, SQL

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

Machine Learning: Classification, regression, anomaly detection, deep learning, neural networks, computer vision (face recognition), predictive modeling, model evaluation, feature engineering

Data Analysis: Data cleaning, data preprocessing, exploratory data analysis, data visualization, dashboards, SQL joins, aggregations, query optimization

Deployment: FastAPI, REST APIs, Streamlit, model deployment

Tools: Git, GitHub, Jupyter Notebook, VS Code, Power BI, Excel, Google Sheets, Microsoft Word, Microsoft PowerPoint, CorelDRAW, Google Meet

Professional: Teaching, mentoring, communication, presentation, problem solving, critical thinking, teamwork, time management

PROJECTS

Face Recognition System | Python, FastAPI | GitHub

- Built a face verification system that compares two uploaded face images and returns a match decision with a similarity score.
- Packaged the model as a pipeline served through a FastAPI application, making it usable as a REST API.

PlotSense AI Hackathon 2025 | Python | GitHub

- Participated in the PlotSense AI Hackathon 2025 and published the solution on GitHub.

Loan Prediction Model | Python, Machine Learning

- Built a machine learning model that predicts loan outcomes from applicant data.

Deep Neural Networks from Scratch | Python, Deep Learning

- Implemented deep neural networks from first principles while completing Andrew Ng's deep learning course.

Final-Year Machine Learning Projects | Python, Machine Learning

- Built a phishing detection system, a house price prediction system trained end to end in a Jupyter notebook, and a credit card anomaly detection model.

Fellowship Academic Data Analysis | Python, Data Analysis | GitHub

- Cleaned, explored and analyzed a fellowship academic dataset and documented the findings in a GitHub repository.

Company Share Investment Analysis | Python, Data Analysis | GitHub

- Analyzed company share data to assess investment performance and published the work on GitHub.

EXPERIENCE

Instructor and Mentor (Industrial Training) Sep 2024 - Feb 2025

Babtech Computers

- Taught and mentored over 50 learners aged 10 to 50 during a 300-level industrial training placement.
- Taught data analytics: advanced Excel, Python for data analytics, Power BI and SQL.
- Taught Python to software development students, and Microsoft Office (Word, Excel, PowerPoint) and CorelDRAW for desktop publishing.
- Adapted lessons to mixed ages and skill levels, explaining technical concepts in plain language.

EDUCATION

BSc Computer Science 2021 - 2025

University of Benin, Benin City, Nigeria (completed November 2025)

TRAINING AND CERTIFICATIONS

Deep Learning Course, Andrew Ng

Certified

Machine Learning Training, Babtech Computers

Practical foundation in machine learning
